

# Aluminium Awning Care Guide

Aluminium Louvres and Fixed Metal Awnings are coated for enhanced durability and protection against environmental effects. They are relatively low-maintenance, but cleaning your awnings from time to time will help to keep them looking new.

## Routine Maintenance

Simply hose down the awning and sponge it with a mild solution of natural soap in lukewarm water to remove dirt. Rinse thoroughly.

Awnings exposed to coastal environments and salt spray should be washed down regularly. Salt build up can be very corrosive and salt damage is not covered in your warranty.

## Aluminium Awnings

- Hose the awning down to remove dirt
- Use a sponge and soapy water on tougher marks
- Awnings in coastal environments need to be washed down regularly, as salt corrosion is not covered by warranties
