

Crimsafe Care Guide

Crimsafe mesh is highly corrosion resistant, however all mesh can trap airborne dirt and impurities, and over time these may give it a stained appearance. Staining of the mesh coating caused by a combination of salt, moisture and airborne impurities may result in reddish marks (airborne impurities) or 'fluffy' white marks (salt build up).

Regular maintenance involves a wash down of frames and mesh with Crimsafe Wash and Wax (or a regular car wash and wax) in warm water using a soft non-abrasive brush, followed by a clean water wipe down.

Clean your Crimsafe every week to every six months depending on how close you live to beachfront.

Crimsafe Care Guide

- Staining can occur if salt and impurities are allowed to build up
- Wash down mesh and frame with Crimsafe Wash and Wax, or regular car wash and wax, with a soft brush. Rinse with clean water
- Clean Crimsafe every six months, or every week if living close to the ocean
